DETAILED ACTION

- This office action is in response to the amendment filed on 10/3/2007.
 Applicants cancelled claims 11-13, 15 and 19. Claims 1-10, 14, 16-18 and 20-24 are currently pending in the application.
- 2. The text of those sections of Title 35 U.S. Code not included in this office action can be found in prior office action.

Claim Rejections - 35 USC § 103

 Claims 1-10, 14, 16-18, 20-24 remain rejected under 35 U.S.C. 103(a) as being unpatentable over Chaudary ((EP 0 196 162 A2) in view of Brown et al (US 2002/0068791 A1).

The rejection is adequately set forth in paragraph 5 of previous office action mailed 7/3/2007 and is incorporated here by reference.

Response to Arguments

4. Applicant's arguments filed 10/3/2007 have been fully considered but they are not persuasive. Specifically, applicant argues (A) office has not provided a reason to modify the cited reference; (B) process of Chaudary uses water-in-oil emulsion while that of Brown et al is an aqueous emulsion. Therefore, the

10/568,777 Art Unit: 1796

reducing agent i.e. 2-hydroxy-2-sulfinatoacetic acid and/or salt thereof, used in one process cannot be used in another process; (C) the order of addition of ingredients is important; (D) neither reference teaches the good speck and gel body content, shortening of induction time, and the superior properties of solid composition.

With respect to (A), see page 5, lines 15-19 of office action mailed 7/3/2007, wherein the motivation to combine the disclosure of Chaudary with teachings of Brown et al is provided. Specifically, residual monomer content can be lowered because of using 2-hydroxy-2-sulfinatoacetic acid as a reducing agent in emulsion polymerization.

With respect to (B), there is nothing on record either in Chaudary et al or Brown et al to indicate that 2-hydroxy-2-sulfinatoacetic acid cannot be used as a reducing agent in an inverse emulsion polymerization. Furthermore, Chaudary et al is open to use of any known redox initiator which may be oil or water soluble (page 3, lines 11-13).

With respect to (C), there is nothing on record in the process of Chaudary et al to indicate that adding the ingredients in a different order will produce a polymer with inferior properties. Furthermore, order of adding ingredients does not appear to be important in light of the specification of instant invention, wherein it is noted that mixing can take place in any way known to person skilled in the art (paragraph 0065) and that the (co)polymerization is affected only after the aqueous phase is emulsified (paragraph 0066).

With respect to (D), properties associated with the polymer and shortening of induction time during polymerization naturally flows from the combined teachings of Chaudary et al and Brown et al.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Contact Information

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Karuna P. Reddy whose telephone number is (571) 272-6566.
